Attention: Mr. Ralph Villani:

Gentlemen:

Please be advised that we have transferred our ownership of the Lima 2000C dragline, serial number 3577-3 to:

USED MACHINERY & DEVELOPMENT CORPORATION OF LOUISIANA, INC.

The principals of this Company are Mr. John A. Wolfe and his son Mr. Kenneth Wolfe. Please release the machine to them.

The new owners will arrange the dismantling and shipping of the machine. Thank you for any assistance you can give them.

Very truly yours,

REPUBLIC EQUIPMENT & MACHINERY CO., INC.

S.S. CAHN, PRESIDENT

BOARD OF HEALTH
TOWNSHIP OF CHESTER
CHESTER, MORRIS COUNTY
NEW JERSEY 07930

October 12, 1973

Mr. Bernard H. Lind, Acting Chief
Bureau of Solid Waste Management
Department of Environmental Protection
John Fitch Plaza, Box 1390
Trenton, N.J.

Dear Mr. Lind:

We have had no communication from you since your letter of August 15, at which time you informed us that various steps would be taken to help alleviate the pollution of Trout Brook and the waters adjacent to the Filiberto Landfill.

Our Board has reviewed your recommendations and presume that you have been supervising the progress made by the landfill operators and that by this time you are in a position to submit to us specific engineering drawings, submitted to you by the landfill operator, to eliminate the leachate in surface runoff. We would like our engineer to review these drawings, or any other information submitted to you by the landfill operator.

We were informed by you at our meeting with your department (in Trenton) on June 26, 1973, that observation wells were being recommended in this type situation, and your suggestion to an interim was "install observation wells, under state direction, and a complete analysis made periodically by a certified laboratory, and the result to be reported to the State."

We are gravely concerned about the pollution of the ground water in the area. Please note the enclosed copy of 'Analytical Results' dated July 23, 1973. In the analysis of the Tingué stream and well water samples, a notation has been made by the analyzer, with regard to the excess amount of ARSENIC and PHENOL. This should be evidence enough that observation wells be installed in order to monitor the ground water, which is, as suspected, contaminated by certain pollutants.

Inasmuch as the landfill license is due to come up for approval in December, an early reply would be appreciated, indicating that some more immediate action is being taken.

Very truly yours,

CHESTER TOWNSHIP BOARD OF HEALTH

Re: Filiberto Landfill
Chester, N.J.

Dear Sir:

Enclosed herewith please find copy of a letter dated June 6, 1973, addressed to this Board, relative to the Filiberto Landfill, from the property owners adjacent to the above mentioned landfill.

As you can see, we are getting continuing complaints about the contamination of the general area of the landfill. Perhaps you can answer Mrs. Bostick and Mrs. Randol's question about the review of the operation of the landfill being open to the public. We would also be interested.

We are scheduling a meeting on June 28, and would appreciate some information as to your findings of the various inspections your department and others have made recently, and what assist: so you can give us to take some action to remedy or alleviate the continuation of this chronic problem.

Very truly yours,

CHESTER TOWNSHIP BOARD OF HEALTH

James Kunkle
President
